

Arnold Ventures Health Care

We are a philanthropy that aims to improve health care delivery, lower costs, and reduce disparities in access and quality

Health care in the United States is more expensive than in any other country in the world, yet the nation's overall health doesn't reflect that level of investment. Our system results in uncoordinated and often unaffordable care for patients; inequities exist among communities; and special interests and market manipulations have inflated costs.

HEALTH CARE

Our work seeks to lower health care spending while ensuring access to high-quality care. We prioritize four objectives to achieve these goals: lower prescription drug prices, lower commercial sector prices, reduce low-value and potentially harmful care, and improve care for complex patients.

PUBLIC HEALTH

We work to remove barriers that impede people's right to care by supporting the training of providers, research on public programs, and state-based efforts to broaden treatment and preventative services. We are currently focused on addressing the opioid epidemic, expanding reproductive care, and improving nutrition.

FUNDING STRATEGY

Our greatest tool to achieving the change we seek is through providing grants and other forms of funding to a broad range of stakeholders to conduct the following types work:

1. Research that shapes how we understand an issue;
2. Policy development and analysis based on the existing evidence;
3. Technical assistance to assist state and federal policymakers with implementing evidence-based policies; and
4. Communications and advocacy to encourage the adoption of evidence-based policies.
